Hello,

The following submission has been created.

Track Name: AICYBER2026

Paper ID: 46

Paper Title: Beyond Speed: Evaluating the Cognitive Cost of Accelerated Learning in Digital Education same

Abstract:
In the emerging digital education environment, the popularity of accelerated learning strategies, including high-speed video playback and microlearning, has increased among students who seek efficient learning tools. However, the effects of such strategies on the cognitive process and the level of retention are questionable. The purpose of this research is to evaluate whether speed learning enables the students to understand the subject or merely creates a false feeling of increased productivity. The research uses a mixed-methods approach, including experimental learning, quizzes, and cognitive load tests, to evaluate the level of comprehension, retention, and mental fatigue among the students. The results of the research show that moderate acceleration of the learning process (1.25x to 1.5x) maximizes the learning efficiency, whereas high-speed playback (2x) increases the level of mental fatigue, thereby reducing the level of retention.
